

Delivering around the World...

Cousins UK.COM

SAME DAY DESPATCH

KEEP UP TO DATE NOTICEBOARD FEBRUARY 2010

JUST A MINUTE:

Finally arrived on the shores of the UK is the best seller from the U.S.A. 'Magic Boric' a quick dip and solder for gold, silver and platinum (full details top right).

Why not plan your fluid changing and purchasing around our twice yearly 'Free Carriage' promotion, many customers already do and take advantage of savings on delivery charges, plus place your order online and receive an 'extra bonus' of an online discount on the fluid, take advantage - nobody does it better... (Extended range of products now included in the promotion.)

A Guide to Polishing

We have completely re-vamped and updated massively the information for the different types and styles of mops and abrasive wheels on our website. There is a 'Quick Guide to Polishing' information page along with recommended compounds for various metals with each application and guidance on different mop material depending on if your looking for a starting to medium, finishing or extra fine finishing - very useful (popular examples on the back page).

"Use US to YOUR advantage" Until next month

Cousins Protection Tape For Bracelets & Watch Cases

Polymide Protection Tape is a durable adhesive tape that protects the bracelet or case surface area you do not want to be affected while polishing, buffing or finishing.

- You cut and apply small pieces of tape to the watch bracelet links adjacent to those finished. The covered areas will then be protected.
- Silicon based adhesive is easy to remove.
- Rolls of 33 metres.

Soldering Pastes, Powder & Fluids

Magic Boric Soldering Dip

- Built-in Flux
- No Flux Needed
- No Alcohol
- No Flaming Up
- Dip & Solder
- For Gold, Silver & Platinum
- 16oz

Magic Boric dip is a fast easy to use soldering solution. Ideal for today's jobber/repairer manufacturing jeweller.

Cut the time when soldering. Magic Boric has always been a best seller in the USA for many years. In a busy retail environment your jobber repairer jeweller can do a customer repair while they wait. The customer piece you will notice will stay shiny polished when you use this dip solution method. You can simply hand the item over straight away once you have repaired it. Clean your item as you would usually (ultrasonic).

Just dip the item to be soldered in 'Magic Boric' and stir to coat the item. Then just solder, there will be no flaming up like there is with alcohol. You will not have to flux, it has a built-in flux! For the ideal high standard finish job after you have soldered dip into your pickle solution for 5 to 10 seconds if required or dip into normal tap water to remove the Magic Boric. 'Magic Boric' will not evaporate! It is a water base, when the water evaporates down; just add a small amount of water to get the coating consistency you desire.

M31428 **£16.95**

General Adhesives

Jewellers Cement

Jewellers cement for setting stones, pearls etc. in paste or metal mounts.

Riva Calico Starting - Medium Mops

BEST SELLERS

Dimension:
Outside Ø x Width x Folds (70 folds per inch face).

This mop has a fine tight cloth weave.

- Mill treated, hard 100% pure cotton, similar to 'G' quality. Enhances cut without loss of head retention.
- Leather and fibril centres.
- The most popular starting mop in the polishing industry.
- A medium grade of loose fold mop.
- Also known in the trade as a grease buffing mop.
- When you use Riva mops it holds its shape very well, and you can push up your pieces to get into those awkward areas.
- An ideal mop to level your metal such as scratches, pit holes, file and casting flash marks.

The Riva mops has very good wear and last longer when in use. Very good to do large batch loads of work with economical spending.
Used with the right bar of compounds you can get a high standard semi bright finish.

- Size:
- Material thickness .24mm (per fold)
 - Centre bore size 9mm

Recommended compounds

- P1410 Tripoli General Purpose Polishing Compound
- P1384 Dialux blue
- P3664 Tripolea 2468
- P1394 Hyfin

Description of what Artifex is:

Artifex Abrasives are open structured foamed matrix of polyurethene, light green in colour an homogeneously mixed with silicon carbide abrasive crystals. The porous bonding gives the abrasive form great flexibility, guarantees cool grinding effect and prevents clogging of the workpiece under difficult working conditions. Artifex Abrasives are generally used dry, but are also suitable for wet grinding. They are easily profiled using conventional dressing tools

- Artifex wheels and cones are very popular for Jewellers, Silversmiths, Light Engineers, Model Makers and in Arts and Crafts.
- Artifex wheels and cones can be used on a whole range of metals such as gold, silver, platinum, titanium, palladium, copper, brass, aluminium and steel.
- Artifex cones are very useful for getting into spherical awkward circular areas for example, inside rings and bangles.
- Fast cutting abrasive prior to polishing / finishing.
- Removing deep pit holes, casting / flash marks.
- Very economical and efficient method for batch work.
- No compounds needed, to be used dry.
- Metal ring on the base strengthens the cone when winding onto the spindle.

Artifex is a grinding material elastically bonded and is available in two types of hardness:
MP - Medium Polyurethane (medium elasticity)
HP - Hard Polyurethane (hard elasticity)

Grit Values:
150 = Medium
250 = Fine (smooth)
Medium will work the metal faster but not leave as smoother finish as 250 grit.

Cones Dimensions:
Small Ø x large Ø x useable length x grit x medium / hard elasticity
• Total Length: 90mm approx.

Wheels Dimensions:
Outside Ø x width x hole Ø x grit x medium / hard elasticity.

Cones:
