#### Speed...Queue Jumping

With web orders, as soon as you click "Purchase Now" the order is sent immediately and printed out automatically in our warehouse for picking and despatch, **there is no time delay** from when you click to us receiving...You're even ahead of customers who are placing orders by phone and fax as they have to be manually entered, web orders are effectively jumping this stage and going straight to warehouse selecting.

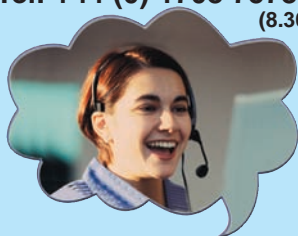

Unlike other Company websites we do not have to go and retrieve the orders, ours are automatically delivered and printed out (already formatted as a picking sheet, in warehouse bin location order) directly into our warehouse for immediate attention.

**Fast, efficient and very accurate.**

# Elmasonic P - The **NEW 2010** Ultrasonic Unit Series

The units of the new Elmasonic series have even more features than the well known Elmasonic S units.

The digital units are most easy to operate and show all relevant values simultaneously in one display, such as preset cleaning time, remaining time, temperature and all other parameters.

The units are more powerful and can be operated at two different frequencies:

- 37kHz (as Elmasonic S) for standard cleaning jobs
- 80kHz for very difficult cleaning items.

Difficult items in particular, tiny holes and clearances are reached by the ultrasound and thoroughly cleaned (e.g. clearances between stone and setting on jewellery). A beautiful side effect of the high frequency is its virtually silent operation.

Coarse cleaning jobs require the 37kHz frequency, for fine cleaning jobs the silent 80kHz frequency can be chosen.

In the event of a required power increase, the operator can activate "Pulse". This function increases the peak power and so removes even tenacious contaminations.

Elmasonic P represents Elma's most universally applicable and technically best-featured series.

- Degas
- Sweep
- Pulse
- Tank Internal Dimensions: Length x Width x Depth (LxWxD)
- Stainless Steel

## P30H

Economically melt your Gold, Silver and non ferrous metals for casting and ingot-pouring applications.

- melting capacity available 1kg, 2kg and 3kg
- precise control of melting temperatures up to 2028°C (1120°F)
- user friendly & fully automatic designed for safe and easy use
- easily programmable controller L E D display
- insulated lid holds in heat and keeps oxygen out for a cleaner melt
- grooved graphite crucible is designed for easy removal from the furnace using specially designed crucible tongs (included)
- steel housing around heating element for long shop life
- very popular for investment gold bar makers
- made in Italy
- when your crucible is full with metal and the temperature set slightly under your setting point stir with appropriate stirring rod (carbon stirring rod included).

Operating Instructions

Stirring your metal with a stirring rod will give you a good clean flow when you are ready to pour into ingot moulds

The Guild is run for the benefit of its members and the Trade, it is run by a Board of Directors (the Council) who are elected by the membership, from the membership, at the AGM each year.

Over the years the trade has changed and continues to change as does the Guild. Until the 1970's the Guild had its own premises in central London, in response to raising rates and overheads the Guild sold these premises and since then the successive Honorary Secretaries have accommodated the Guild office.

The Guild is responsive to the needs of members; technical enquiries are fielded to members with specialist knowledge, enquiries from members of the public are also dealt with accordingly.

**Guild Centenary Lunch**

All of the Guild Council are, or have been, professionally engaged within the Trade and are all mindful of the continuing problems of running a business, the restrictive supply of parts for watches, the continually changing legislation for those who employ others and for those who are self employed.

The current annual Guild membership subscription is £27 plus a one off £5 administration fee.

The Guild does not knowingly admit into membership those who trade from market stalls exchanging batteries and straps or selling cheap inferior watches and clocks.

If you earn your living from Horology or it's allied trades and crafts, you are eligible to apply for membership of the Guild. Membership of the Guild is by election and all applicants must complete a membership application form.

For further information and an application form please contact:

The Hon. Secretary, The BWCMG, PO Box 2368, Romford, RM1 2YZ

Tel: 01708 750616

Email: [sec@bwcmg.org](mailto:sec@bwcmg.org)

## The British Watch & Clock Makers' Guild

*Working For The  
Professional Horologist  
For Over 100 Years'*

Founded 1907

**President: The Marquess  
of Northampton**

### **A Recent Meeting of the Guild Council**

L-R: Roy Hunt, Lionel Blowes, Frank Boswell, Robert Ball, Jimmy Kemp,

## The British Watch & Clock Makers' Guild

The British Watch & Clock Makers' Guild was founded in 1907 to look after the interests of those professionally employed in the Trade and is still thriving today.

In 1907 a group of professional watchmakers, encouraged by the British Horological Institute, got together in Clerkenwell and formed the British Watch & Clock Makers Guild.

One of the first actions of the newly formed Guild was to set about producing a minimum suggested repair price structure for clocks and watches; over the years this type of trade practice has fallen outside the law, the Guild now carries out an annual repair price survey amongst all its members and the results are published in the form of a Year Book, this is sent to all members each year.

The results of this survey contain statistical averages of current repair price trends and other data that give an indication of how those in the trade are performing. Also contained within the Year Book are classified lists of members who offer specialist trade services, along with other useful information.

Members of the Guild are issued with a membership certificate and can also use the Guild Emblem on their premises and letterhead (in accordance with Guild rules). The Guild also publishes "Time Piece" the Guild news letter which is sent to members three times each year.

The Guild is a trade body that encourages cooperation within our industry. Other trade bodies and organisations such as the National Benevolent Society of Watch and Clock Makers, The British Horological Institute, The Worshipful Company of Clockmakers and the various horological training and teaching establishments are all Honorary Members of the Guild; the Guild's aim has always been to encourage dialogue and promote the good name of our Trade.

As well as the business support that the Guild offers, there are occasional social visits arranged to places of interest; such as the Westminster Clock, Stately Homes and other social outings. The Guild's Centenary in 2007 saw 100 members and their guests sit down to a meal in the Royal Naval College at Greenwich. Such occasions give members an opportunity to meet others who earn their livelihood from watch and clock repair and our allied trades.

**Guild visit and lunch at West Dean College**
