

Witschi Proofmaster S & Elma Spheric

“Revision/calibration recommended” message appearing on your Elma Spheric or Witschi Proofmaster?

Cousins item Codes W32404 & W20802

If a “revision/calibration recommended” message appears on your Elma Spheric or Witschi Proofmaster within 2 years of having the machine, Witschi state that you need to update your machine with the latest software.

This updated version of software you can download from the Witschi service site after registration (<http://support.witschi.com>). If you have written your own specific customer programs, these need to be reentered after installing the software.

Physical re-calibration is only recommended after 8 years of operation, or 100,000 cycles (calculated automatically by the machine, and then displayed when 100,000 has been reached). To obtain a quote including turnaround for physical recalibration, please use our website feedback service, providing all your details as well as your machines model and serial number.
