

Instructions on Connecting the Heater (P19796)

The best way to wire the heater up is, to mark the wires before he removes it. If he has already removed it, then he needs to follow the following.

1. Make sure the plug is removed from the mains and the tanks are empty.
2. Remove the red cap and disconnect the mains cable.
3. Remove the heater from the tank.
4. Fit the new heater using the new gasket.
5. Connect one side of the thermostat to the heater connector.
6. Connect the mains from the panel to the other heater terminal and also the 2nd thermostat terminal.
7. Ensure all terminal are secure.
8. Fit the red cap and test unit with water only.
9. If you have no leaks, plug it in and test.
