

K1080 / K1090 Accessories Applications

1. The graver holder (A) screws into the front end of the hand piece and converts it into a power engraving tool. It comes with a 5/64" Allen key (H).
2. Three anvil points (B) are supplied so that the tips can be shaped or modified for different stone setting operations. For these anvil points, thread in the anvil point adaptor (C) and tighten with the wrench (F). Thread an anvil point (B) in to the anvil point adaptor (C) and tighten it with a pin (G) through its cross hole.
3. Thread any of the three anvil points into the holder (E) to grind and sharpen the point.
4. Texturing and beading tools with non-threaded 2,35mm shanks, such as the pave diamond point (code FDR15G) can be used with the adaptor(D) in the hand piece. Thread the adaptor into the front of the hand piece and tighten with the wrench (F).
5. Insert a 2.35mm shank tool into the adaptor (D) and tighten the set screw with a Phillips screwdriver (not supplied).
