- Compact, easy to operate, and built for lighter use
- Affordable and dependable entry-level mill

Main Description

Durston Basics Combination Rolling Mill. Designed for new jewellers and hobbyists starting their rolling mill journey, this compact tool offers everything needed to begin working with metal. It combines a flat rolling area of 65mm with nine square grooves, allowing users to roll both sheet and wire in one versatile unit.

Built for light to medium use, the mill provides smooth operation and steady control when working with non-ferrous metals such as silver, copper, and brass. Its solid rollers and straightforward design make it simple to use and maintain, offering an affordable way to develop essential metal forming skills.

Durston Basics. A curated selection of proven tools sourced from reputable suppliers worldwide, including select products from Asia and The Far East. Each product in this range is chosen for its reliability and value, providing an affordable option, though not at the same quality level you'd expect from a Durston-made product. These tools are not made by Durston but are designed to offer accessible options, backed by Durston's expertise and standards.
