

## OMO Stone-set ringstretcher # 35/AN

Our ringstretcher easily enlarges gem-set rings without the removal of the stone. It comes with a set of 16 dies + 2 already mounted on the stretcher. Two of these rollers are channelled for flat shanks. It can be used on plain wedding rings too.

### DIRECTIONS FOR USE

For a easier use, you can bolt the ringstretcher to a bench through the 3 holes of the base.

- Put your ring (with the stone outside) around the centre part of the ringstretcher, as showed in the picture above.
- Approach the part "A" to the ring, by turning (screwing) the handle.
- If you now move the handle backwards and forwards, you will make some pressure on the shank of the ring, so it will stretch.
- You can use the several rollers according to the shape of your ring.
